1. Project Overview

The **Sales Analysis Dashboard** is created in **Microsoft Excel** to analyze business sales performance. It helps in understanding revenue trends, customer purchasing behavior, and product performance using interactive charts, KPIs, and filters.

---

2. Key Performance Indicators (KPIs)

The dashboard highlights important business metrics:

- **Total Orders:** 1000
- **Total Revenue:** ₹35,20,984
- **Average Order Delivery Time:** 5.53 days
- **Average Customer Spending:** ₹3,520.98

These KPIs provide a quick overview of the company's sales performance.

---

3. Revenue by Occasion

This section shows revenue generated during different occasions such as **Anniversary, Birthday, Diwali, Holi, Raksha Bandhan, and Valentine's Day**.
The analysis helps identify which occasions drive the most sales and helps businesses plan promotions during peak demand periods.

---

4. Revenue by Category

The dashboard analyzes revenue based on product categories like **Cake, Colors, Mugs, Plants, Soft Toys, and Sweets**.
This helps businesses understand which product categories contribute the most to overall revenue.

---

5. Revenue by Hour (Order Time)

This chart shows revenue trends based on **order time during the day**.
It helps identify **peak order hours**, enabling businesses to manage delivery operations and marketing strategies more effectively.

---

6. Revenue by Month

Monthly sales analysis highlights how revenue changes throughout the year.
The dashboard indicates higher sales during **festival months and special occasions**, helping businesses understand seasonal demand patterns.

---

7. Top 5 Products by Revenue

This section identifies the **top-performing products** such as **Deserunt Box, Dolores Gift, Harum Pack, Magnum Set, and Quia Gift**.
It helps businesses focus on high-demand products and improve inventory planning.

---

8. Top 10 Cities by Revenue

The dashboard highlights cities generating the highest revenue such as **Dhanbad, Imphal, Kavai, and Dibrugarh**.
This insight helps businesses target high-performing locations for marketing and expansion.

---

9. Dashboard Features

The dashboard includes interactive **filters and slicers** such as:

- Order Date
- Delivery Date
- Occasion

These filters allow users to dynamically analyze sales data based on different conditions.

---

10. Conclusion

The Sales Analysis Dashboard converts raw sales data into meaningful insights using **data visualization, pivot tables, and Excel analytics tools**. It helps businesses monitor performance, identify trends, and make data-driven decisions to improve sales strategies.
